

Question No-17:

//Program to calculate the Salary of an Employee

```
#include<stdio.h> int
```

```
main()
```

```
{//bs,ns,gs are net salary, net salary and gross salary respectively
```

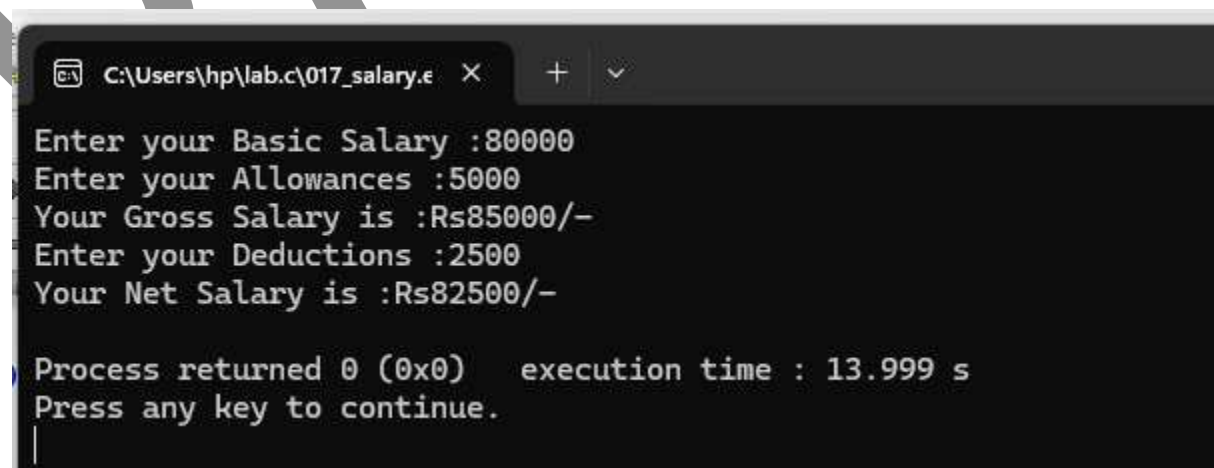

```
int bs,ns,gs,allowances,deductions;
```

```
bs=ns=gs=allowances=deductions=0; printf("Enter your Basic  
Salary :"); scanf("%d",&bs);
```

```
printf("Enter your Allowances :");  
scanf("%d",&allowances); gs=bs+allowances;
```

```
printf("Your Gross Salary is :Rs%d/-\n",gs);  
printf("Enter your Deductions :");  
scanf("%d",&deductions); ns=gs-deductions;
```

```
printf("Your Net Salary is :Rs%d/-\n");  
getch();  
return 0; }
```

The screenshot shows a Windows command prompt window with a single tab titled "C:\Users\hp\lab.c\017_salary.e". The program's output is as follows:

```
Enter your Basic Salary :80000
Enter your Allowances :5000
Your Gross Salary is :Rs85000/-
Enter your Deductions :2500
Your Net Salary is :Rs82500/-

Process returned 0 (0x0)   execution time : 13.999 s
Press any key to continue.
